912	Educated	Tara Westover	Non-Fiction	2018
322	Night	Elie Wiesel	Non-Fiction	1956
156	Where the Wild Things Are	Maurice Sendak	Childrens	1963

checkouts

id	start_date	due_date	card_num	book_id
567	2022-05-13	2022-05-27	54378	638
568	2022-06-10	2022-06-24	54378	322
569	2022-06-27	2022-07-11	45783	156
570	2022-08-14	2022-08-28	90123	912

A database is an organized collection of structured information, or data, typically stored electronically in a computer system.

Introducing databases

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

Relational databases

- Define relationships between tables of data inside the database

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

books

id	title	author	genre	pub_year
638	Being Mortal	Atul Gawande	Non-Fiction	2015
912	Educated	Tara Westover	Non-Fiction	2018
322	Night	Elie Wiesel	Non-Fiction	1956
156	Where the Wild Things Are	Maurice Sendak	Childrens	1963

checkouts

id	start_date	due_date	card_num	book_id
567	2022-05-13	2022-05-27	54378	638
568	2022-06-10	2022-06-24	54378	322
569	2022-06-27	2022-07-11	45783	156
570	2022-08-14	2022-08-28	90123	912

Database advantages

- More storage than spreadsheet applications
- Storage is more secure
Database advantages

SQL

- Short for Structured Query Language
- The most widely used programming language for databases

```sql
SELECT *
FROM patrons
LIMIT 30
```

Tables

INTRODUCTION TO SQL

SQL

A seat at the table

- Table rows and columns are referred to as *records* and *fields*

- Fields are set at database creation; there is no limit to the number of records

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

books

id	title	author	genre	pub_year
638	Being Mortal	Atul Gawande	Non-Fiction	2015
912	Educated	Tara Westover	Non-Fiction	2018
322	Night	Elie Wiesel	Non-Fiction	1956
156	Where the Wild Things Are	Maurice Sendak	Childrens	1963

checkouts

id	start_date	due_date	card_num	book_id
567	2022-05-13	2022-05-27	54378	638
568	2022-06-10	2022-06-24	54378	322
569	2022-06-27	2022-07-11	45783	156
570	2022-08-14	2022-08-28	90123	912

Good table manners

Table names should...

- be lowercase

- have no spaces—use underscores instead

- refer to a collective group or be plural

Patrons

library patrons

patron

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

Laying the table: records

A record is a row that holds data on an individual observation

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

a record →

Laying the table: fields

A field is a column that holds one piece of information about all records

a field

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

More table manners

Field names should...

- be lowercase
- have no spaces
- be singular
- be different from other field names
- be different from the table name

🚫 patrons   🚫 Member_Year   🚫 total fine

patrons

| card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

Assigned seats

- *Unique identifiers* are used to identify records in a table

- They are unique and often numbers

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

unique identifier

The more the merrier

patrons

Data

INTRODUCTION TO SQL

SQL

SQL data types

all one
data type

all one
data type
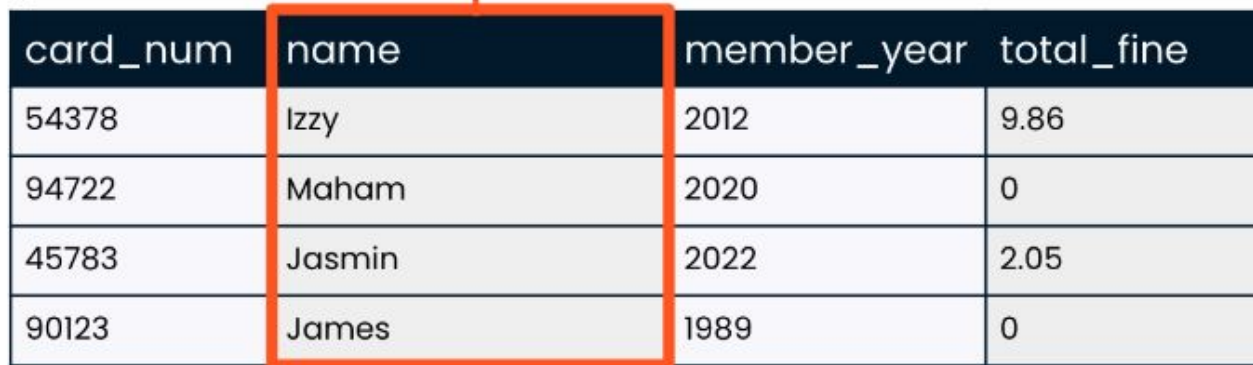

all one
data type

all one
data type

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

- Different types of data are stored differently and take up different space

- Some operations only apply to certain data types

Strings

a string field

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

- A string is a sequence of characters such as letters or punctuation

- `VARCHAR` is a flexible and popular string data type in SQL

Integers

an integer field

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

- Integers store whole numbers

- `INT` is a flexible and popular integer data type in SQL

Floats

a float field

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

- Floats store numbers that include a fractional part

- `NUMERIC` is a flexible and popular float data type in SQL

Schemas

A schema is a collection of database objects like tables, triggers, stored procedures, etc.

patrons	
card_num	INT
name	VARCHAR
member_year	INT
total_fine	NUMERIC

books	
id	INT
title	VARCHAR
author	VARCHAR
genre	VARCHAR
pub_year	INT

checkouts	
id	INT
start_date	DATE
due_date	DATE
card_num	INT
book_id	INT
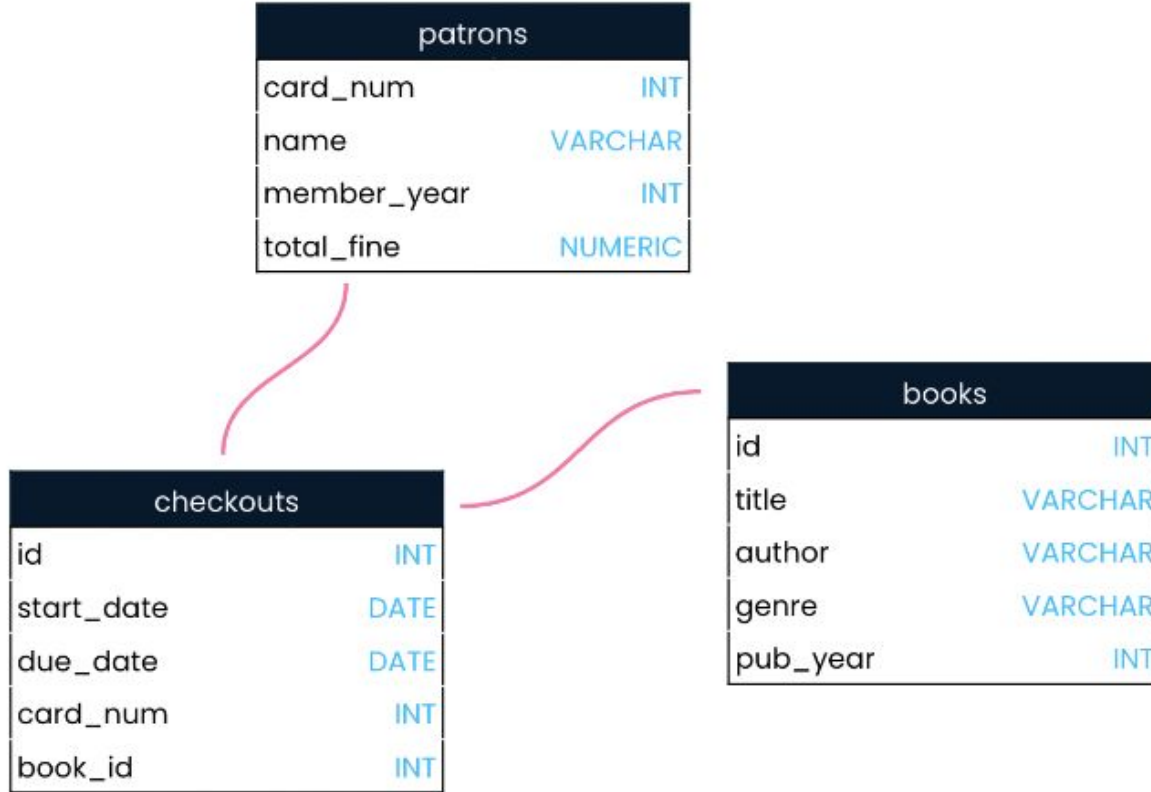

Introducing queries

What is SQL useful for?

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

SQL is used to communicate with a database and it is used to store, retrieve, and manipulate data in relational databases

books

id	title	author	genre	pub_year
638	Being Mortal	Atul Gawande	Non-Fiction	2015
912	Educated	Tara Westover	Non-Fiction	2018
322	Night	Elie Wiesel	Non-Fiction	1956
156	Where the Wild Things Are	Maurice Sendak	Childrens	1963

checkouts

id	start_date	due_date	card_num	book_id
567	2022-05-13	2022-05-27	54378	638
568	2022-06-10	2022-06-24	54378	322
569	2022-06-27	2022-07-11	45783	156
570	2022-08-14	2022-08-28	90123	912

Best for large datasets
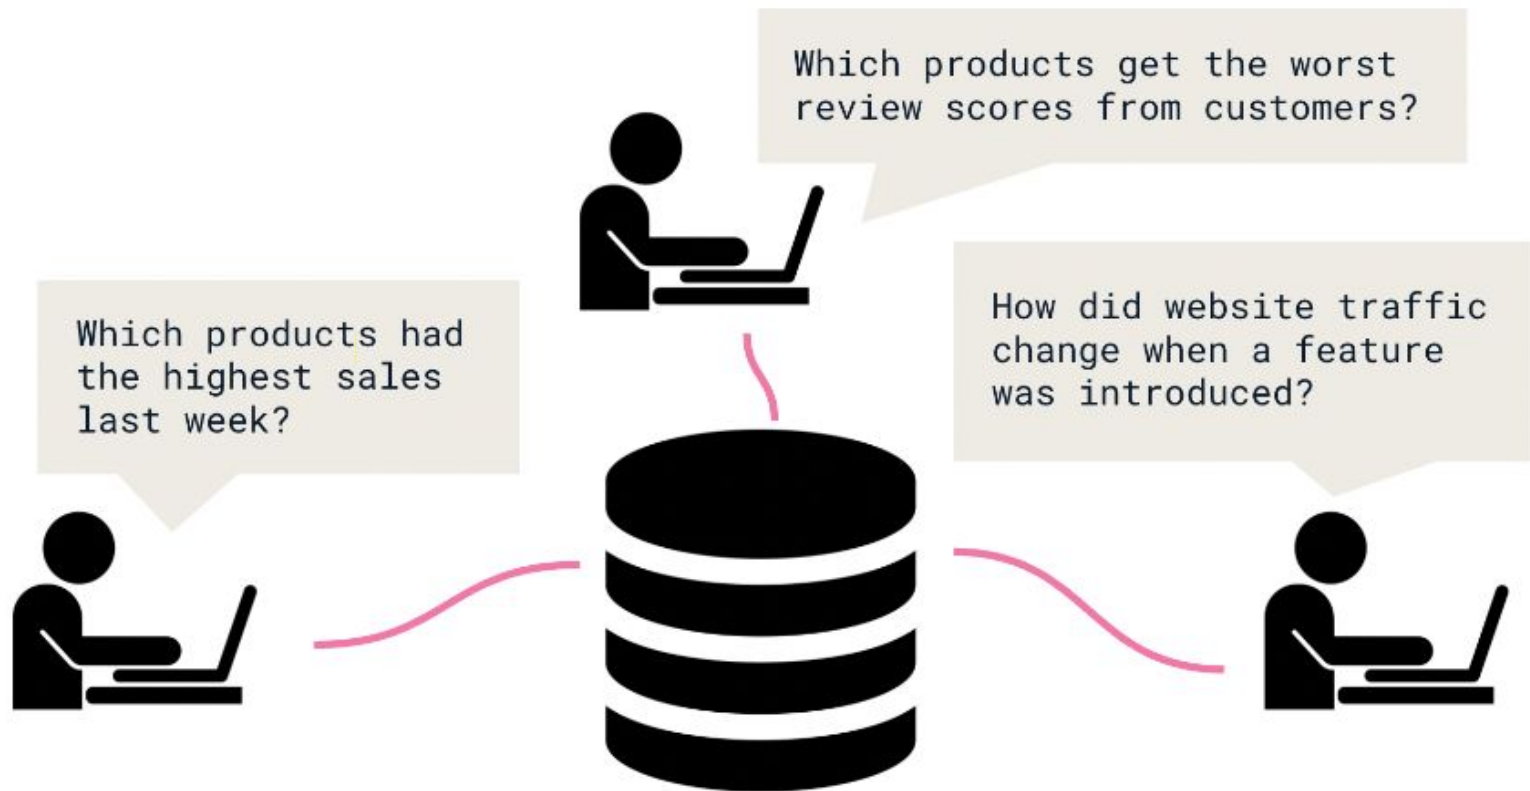

Keywords

Keywords are reserved words for operations

Common keywords: SELECT , FROM

```
SELECT name
```

```
FROM patrons
```

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

patrons

card_num	INT
name	VARCHAR
member_year	INT
total_fine	NUMERIC

checkouts

id	INT
start_date	DATE
due_date	DATE
card_num	INT

books

id	INT
title	VARCHAR
author	VARCHAR
genre	VARCHAR
pub_year	INT

Our first query

```sql
SELECT name
FROM patrons;
```

```
| name    |
|---------|
| Izzy    |
| Maham   |
| Jasmin  |
| James   |
```

patrons

card_num	name	member_year	total_fine
54378	Izzy	2012	9.86
94722	Maham	2020	0
45783	Jasmin	2022	2.05
90123	James	1989	0

- Query results often called *result set*

Selecting multiple fields

```
SELECT card_num, name
FROM patrons;
```

```
SELECT name, card_num
FROM patrons;
```

```
| card_num | name   |
|----------|--------|
| 54378    | Izzy   |
| 94722    | Maham  |
| 45783    | Jasmin |
| 90123    | James  |
```

```
| name   | card_num |
|--------|----------|
| Izzy   | 54378    |
| Maham  | 94722    |
| Jasmin | 45783    |
| James  | 90123    |
```

Selecting multiple fields

```sql
SELECT name, card_num, total_fine
FROM patrons;
```

card_num	name	total_fine
54378	Izzy	9.86
94722	Maham	0
45783	Jasmin	2.05
90123	James	0

Selecting all fields

```sql
SELECT *
FROM patrons;
```

```
| card_num | name   | member_year | total_fine |
|----------|--------|-------------|------------|
| 54378    | Izzy   | 2012        | 9.86       |
| 94722    | Maham  | 2020        | 0          |
| 45783    | Jasmin | 2022        | 2.05       |
| 90123    | James  | 1989        | 0          |
```

Writing queries

INTRODUCTION TO SQL

SQL

Aliasing

Use *aliasing* to rename columns

```sql
SELECT name AS first_name, year_hired
FROM employees;
```

```
| first_name | year_hired |
|------------|------------|
| Darius     | 2020       |
| Raven      | 2017       |
| Eduardo    | 2022       |
| Maggie     | 2021       |
| Amy        | 2020       |
| Meehir     | 2021       |
```

Selecting distinct records

JO DISTINCT(UNIQUE) ko hi select krta h

```sql
SELECT year_hired
FROM employees;
```

```
| year_hired |
|------------|
| 2020       |
| 2017       |
| 2022       |
| 2021       |
| 2020       |
| 2021       |
```

```sql
SELECT DISTINCT year_hired
FROM employees;
```

```
| year_hired |
|------------|
| 2020       |
| 2017       |
| 2022       |
| 2021       |
```

DISTINCT with multiple fields

employees

id	name	dept_id	job_level_id	year_hired
54378	Darius	1	3	2020
94722	Raven	2	3	2017
45783	Eduardo	2	1	2022
90123	Maggie	3	2	2011
67284	Amy	2	2	2009
26148	Meehir	3	3	2021

```
SELECT dept_id, year_hired
FROM employees;
```

```
| dept_id | year_hired |
|---------|------------|
| 1       | 2020       |
| 2       | 2017       |
| 2       | 2022       |
| 3       | 2021       |
| 2       | 2020       |
| 3       | 2021       |
```

DISTINCT with multiple fields

```sql
SELECT DISTINCT dept_id, year_hired
FROM employees;
```

dept_id	year_hired
1	2020
2	2017
2	2022
3	2021
2	2020

Views

- A *view* is a virtual table that is the result of a saved SQL `SELECT` statement

- When accessed, views automatically update in response to updates in the underlying data

```sql
CREATE VIEW employee_hire_years AS
SELECT id, name, year_hired
FROM employees;
```

Using views

```sql
SELECT id, name
FROM employee_hire_years;
```

```
| id    | name     |
|-------|----------|
| 54378 | Darius   |
| 94722 | Raven    |
| 45783 | Eduardo  |
| 90123 | Maggie   |
| 67284 | Amy      |
| 26148 | Meehir   |
```

SQL flavors

INTRODUCTION TO SQL

SQL

SQL flavors

- Both free and paid

- All used with relational databases

- Vast majority of keywords are the same

- All must follow universal standards

- Only the additions on top of these standards make flavors different

Two popular SQL flavors

PostgreSQL

- Free and open-source relational database system

- Created at the University of California, Berkeley

- "PostgreSQL" refers to both the PostgreSQL database system and its associated SQL flavor

SQL Server

- Has free and paid versions

- Created by Microsoft

- T-SQL is Microsoft's SQL flavor, used with SQL Server databases

Comparing PostgreSQL and SQL Server

- Like dialects of the same language

PostgreSQL:

```
SELECT id, name
FROM employees
LIMIT 2;
```

```
| id     | name     |
|--------|----------|
| 54378  | Darius   |
| 94722  | Raven    |
```

- Example: limiting number of results

SQL Server:

```
SELECT TOP(2) id, name
FROM employees;
```

```
| id     | name     |
|--------|----------|
| 54378  | Darius   |
| 94722  | Raven    |
```

Choosing a flavor

Just like with ice cream, any flavor is probably a good choice!
